

BREEDING CHART

(Copyright applied for)

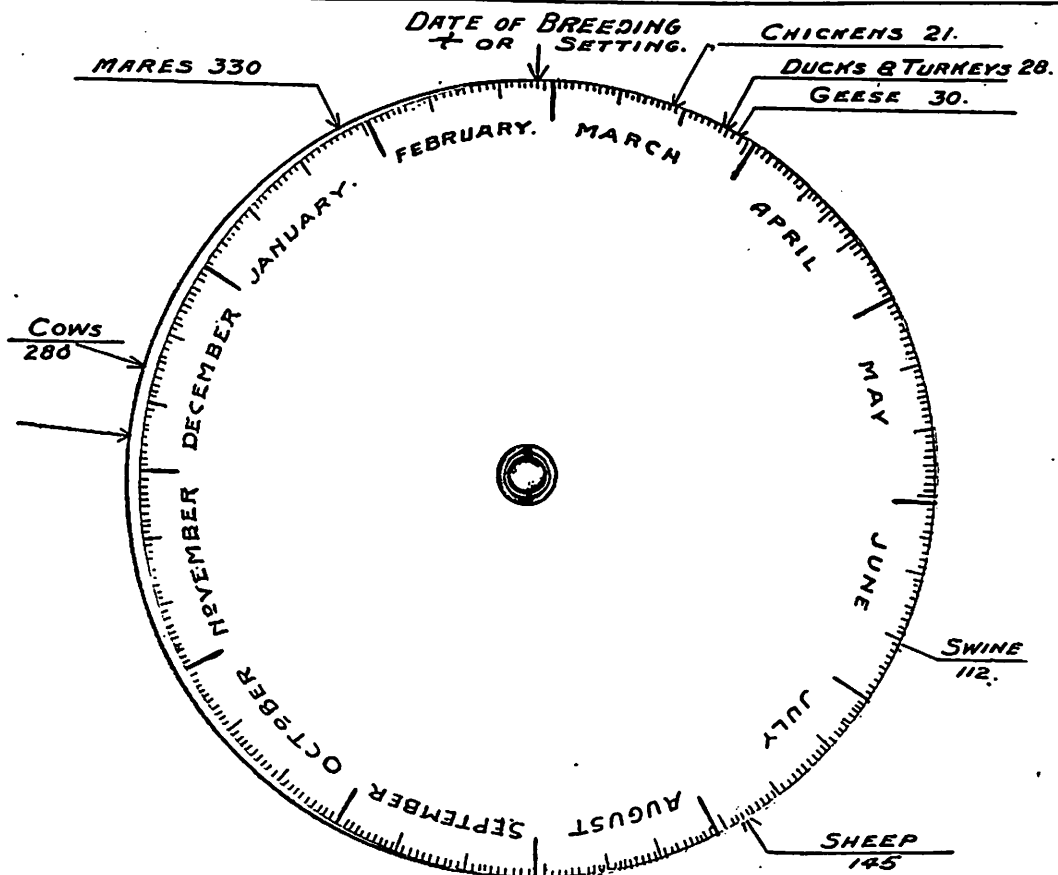

COMPLIMENTS OF

HEBER CITY MILLS

Flour, Bran, Shorts, Germade, Graham Flour
Phone 25 Heber, Utah.

DIRECTIONS: Turn disk until arrow at the top points to the calendar date on which animals are bred, then read at the point of each arrow the date of hatching or probable birth date of the young animals. Allow several days over if it is the animals first pregnancy. These figures [number of days of gestation] are average for thousands of animals from statistics of state agricultural experiment stations in the United States.

Keep records on your breeding stock. Expensive purebred animals, both the dam and the young, are often lost thru lack of care during late pregnancy. Proper feeding, drying up and shelter, will often prevent milk fever in cows and sows. Ask your county agricultural agent for advice on rations for pregnant animals.
